"Disinfection of the Hands with Ritosept Before Surgery."

Budapest, Magyar Sebeszet, Vol XVI, No 2, May 1963, pages 97-101.

Abstract: [Authors' Hungarian summary modified] Comparative clinical observations and 150 bacteriological tests were conducted on 1000 cases of surgery where Ritosept or the Szpasszokukockai and Koosergin ammoniacal disinfectant were used for handwash. According to the results, Ritosept insured almost 100 per cent sterility while the above mentioned Russian method only 75 per cent and the classical Furbinger technique only 60 per cent. After long surgical procedures the culture taken from the gloves was also almost 100 per cent sterile when Ritosept was used. It is concluded that Ritosept is an excellent, reliable hand disinfectant which simplifies surgical washing considerably. It can be used well along with soap and is well tolerated by the skin.

TITLE: Phenthiazine derivatives, VI. Attempts at the preparation of phenthiazines with a selective coronary dilatatory effect 27

SOURCE: Academia scientiarum hungaricae. Acta chimica, v. 44, no. 3, 1965, 301-305

TOPIC TAGS: isomer, tranquilizer, drug effect, circulatory drug, pharmacology, nonmetallic organic derivative

ABSTRACT: Various structural changes were made in the tranquilizer Methophenazine in order to separate its coronary dilatory effect which is also of therapeutic importance. Certain correlations between structure and coronary dilatatory effect were found in the course of pharmaceutical testing of the derivatives. The properties desired by the authors were found most favorable in a Methophenazine isomer [ $\beta$ -chloro-10- $\alpha$ -[4'-( $\beta'$ -hydroxyethyl)-piperazinyl-1']-propylphenthiazine-3",4",5"-trimethoxybenzoate]. Having a slight sedative effect only and almost no effect on the autonomic nervous system, Isomethophenazine can be considered a phenthiazine derivative with a potential for selective coronary dilatatory action. Some polymethoxyphenothiazine derivatives, and some phenthiazine derivatives in combination with glucose or with sugar alcohols were also prepared in the course of this work. Orig. art. has: 1 table. Abstract : Study of reactivity of steroid alkaloids tomatidin (I) and  $\delta^{10}$ -solasodanole (II), differing in spatial configuration at C<sub>(22)</sub> and C<sub>(25)</sub> atoms. Distinct properties of I and II in reactions of reduction, acetylation, interaction with N-bromacetamide (III), and also the differences in pK (I 6.95, II 6.4), Debye-Scherrer pattern, and ultraviolet spectra of I and II are due to shielding which is caused by polar or equatorial position of CH<sub>3</sub>-groups in the F ring. By acetylation of 0.5 g I with 10 ml (CH<sub>3</sub>CO)<sub>2</sub>O and 15 ml pyridine (standing for 1 week) there was obtained N,O-diacetyl-I, yield 0.64 g, MP 189-191° (from alcohol). From II there is obtained under these conditions a not readily

ORG: Research Institute of the Pharmaceutical Industry, Budapest (Gyogyszeripari Kutato Intezet)TITLE: 6 Neuroplegic and other pharmacological properties of methophenazine (frenolon)SOURCE: Academia scientiarum hungaricae. Acta physiologica, v. 27, no. 1, 1965, 65-80TOPIC TAGS: pharmacology, nervous system drug, rat

ABSTRACT: When administered orally or parenterally, the neuromuscular effects of methophenazine are 3-6 times as strong as those of chlorpromazine in regard to the inhibition of orientation and conditioned reflexes, cataleptogenic action, inhibition of amphetamine toxicity and inhibition of the central stimulating effect of amphetamine. It potentiates the analgesic action of morphine. Similarly to perphenazine and thiopropazate, it has a weaker hypothermic action than chlorpromazine in barbiturate anesthesia of rats. Its acute toxicity is considerably lower than that of the other three compounds mentioned. No detectable macroscopic or histological changes were produced after subacute and chronic use in rats and dogs. The results indicate that incorporation of the trimethoxyphenyl group into the perphenazine molecule did not change its phenothiazine character. As opposed to reserpine, methophenazine is a potent

adrenolytic and serotoninolytic agent. Several years of clinical trials support the pharmacological findings that it is a more effective, less toxic neuroleptic drug than chlorpromazine with less side effects. The authors thank Doctor F. Karsag and Doctor A. Szeky for cooperation in the investigations concerning chronic toxicity and the histological studies. Further thanks are given to Mrs. Zs. Anheuer, Mrs. K. E. Mariassy and Zs. Csizmadia for technical assistance. Orig. art. has: 3 figures and 9 tables. [Orig. art. in Eng.] [JPRS]

Title : Tuberculestatically Active Compounds. Preparation of  
Thiocemicarbazone of p-Acetylaminobenzaldehyde.

Orig Pub: Magyar ken. folycirat, 1957, 63, No 1, 27-28.

Abstract: For the industrial synthesis of thiocemicarbazone of  
p-acetylaminobenzaldehyde (I), p-nitrotoluene is reduced  
with Na-polysulfide, the alkaline solution is mixed  
with the solution of thiocemicarbazide, acidified with  
CH<sub>3</sub>COOH and the produced thiocemicarbazone of p-aminoben-  
zaldehyde (II) is acetylated. In this way it is possible  
to avoid polymerization from taking place in the separa-

tion of p-aminobenzaldehyde (III) and to utilize all the III obtained for the synthesis of I. Suspension of 30 g of S powder in 50 ml of alcohol is added to 600 ml of aqueous solution of 62.5 g of NaOH, the mixture is boiled for about 30 min. until S dissolves, solution of 50 g of nitrotoluene in 250 ml of alcohol is added and all is boiled for 1.5 hour. Solution of 16.5 g of thiosemicarbazide in 160 ml of hot water is cooled to 20° and added, the mixture is carefully acidified with 50%  $\text{CH}_3\text{COCH}$  and 50-54 g of II contaminated with S is filtered off. Decomposition point 192° (from alcohol). 600 ml of acetone is added to the product, it is stirred for several minutes, the insoluble admixtures are filtered off, 24 ml of  $(\text{CH}_3\text{CO})_2\text{O}$  and 2 ml of pyridine are added to the

Abstract: aluminum are added and boiled for an additional four hours. At 100°C. the contents are diluted with water, made alkaline to the phenolphthalein with sodium hydroxide and III is steam distilled; yield 42.6%. Under analogous conditions but using iron instead, the yield was 74.3%. The latter varies depending on different grades of iron in a 20% range (steel is better than cast iron; iron which has been reduced with hydrogen reacts badly). Oxidation of III to I in addition to KMnO<sub>4</sub> (yield 70%) was accomplished with SeO<sub>2</sub> and NaOCl. Five grams of III, 0.4 grams of SeO<sub>2</sub>, 1.5 milliliters of water, 48 grams of concentrated sulfuric acid were heated for two hours at 280°C.; then 200 milliliters of water was added and the pH was adjusted to 3.6 and while boiling, a saturated solution

Abstract: from  $\text{CCl}_4$  extract by distillation at 4-5 millimeters, yield 94%. Upon oxidation with  $\text{SeO}_2$ , the temperature may be raised to  $310^\circ\text{C}$ . after the evolution of gases stops, and after ~8 hours it can be raised to  $325^\circ\text{C}$ ., 114 grams of  $\text{HOSO}_2\text{Cl}$  is added to the alcoholic solution of the remainder, and by a further procedure, similarly to the one described above, there is obtained (without a preliminary separation of I) the ethyl ester of I (yield 84% based on III). II was obtained from the latter by a conventional method, m. p.  $168-170^\circ\text{C}$ .  
-- S. Rosenfel'd.

a previously described method (see C. P. Hutterer and C. Djerassi, J Amer Chem Soc, 68, 1999 (1946)). A suspension of 102.5 gms 77% NaNH<sub>2</sub> in 150 ml pyridine is treated (45-50°, 30 min) with a solution of 188 gms 2-aminopyridine in 550 ml pyridine and heated to 100° for 90 min. By dissolving 144 gms of the hydrochloride of  $\beta$ -diethylaminoethyl chloride at 0° in a mixture of 250 ml 5N NaOH + 250 ml toluene, the free base is obtained [sic] which is added to a solution of 2-aminopyridine; after heating (24 hrs), 105° and removal of the solvent by distillation, the residue is treated with 300 ml ice water and extracted with toluene; distillation of the extract at 130-141° gives 124 gms II, yield 75% as against 50% (see reference cited). A solution

(3)

$\rho\text{-MeCH}_2\text{CHCH}_2\text{OC}_6\text{H}_4\text{CHO}$ , b<sub>1</sub> 140-4°;  $\rho\text{-CH}_2\text{CH}_2\text{CH}_2\text{CH}_2$ ,

$\text{CH}_2\text{CH}_2\text{CCl}_2\text{CH}_2\text{OC}_6\text{H}_4\text{CHO}$ , b<sub>1</sub> 160-5°;  $\rho\text{-CH}_2\text{CH}_2\text{CH}_2\text{CH}_2\text{CCl}_2\text{CH}_2\text{OC}_6\text{H}_4\text{CHO}$ , b<sub>1</sub> 150-5°. A mixt. of 13 g. X, 20 ml. Me<sub>2</sub>CO, 550 ml. H<sub>2</sub>O, 350 ml. EtOH, and 20 ml. 10% aq. NaOH shaken frequently over 3 days at room temp., dild. with H<sub>2</sub>O, the product filtered, and recrystd. gave 3.24 g.  $\rho\text{-CH}_2\text{CHCH}_2\text{OC}_6\text{H}_4\text{CH}_2\text{CHO}$  (XVII), m. 57-9°. Treating 7 g. XVII and 8 g. X with 20 ml. 10% aq. NaOH, filtering after 24 hrs., and recrystd. gave 6.5 g.  $\rho\text{-CH}_2\text{CH}_2\text{CH}_2\text{OC}_6\text{H}_4\text{CH}_2\text{CHOCH}_2\text{CH}_2\text{CH}_2\text{OC}_6\text{H}_4\text{CH}_2\text{CHO}$ , m. 122-4° (from EtOH), which did not react with H<sub>2</sub>NNHCSNH<sub>2</sub>,  $\rho\text{-O}_2\text{NC}_6\text{H}_4\text{SO}_2\text{CH}_2\text{CH}_2\text{CHO(OAc)}_2$  (7.3 g.) in 100 ml. EtOAc hydrogenated 50 min. over Pd-C, the mixt. filtered, the filtrate evapd. *in vacuo*, and the residue recrystd. from EtOH gave 3.38 g.  $\rho\text{-H}_2\text{N}$  analog, m. 172-3°. The thiosemicarbazones were prep'd. from the oxo compds. in the usual manner. Et 2-hydroxycyclononinate (1 g.) and 2 ml. N<sub>2</sub>H<sub>4</sub>.H<sub>2</sub>O boiled 2 hrs. and recrystd. gave I, m. 287-8° (decompn.). 2-Quinoxalinecarboxylic acid [m. 202° (decompn.)] (3.2 g.) in 30 ml. abs. EtOH with 3 g. H<sub>2</sub>SO<sub>4</sub> refluxed 3.5 hrs., the soln. dild. with 100 ml. H<sub>2</sub>O, neutralized with Na<sub>2</sub>CO<sub>3</sub>, and the ppt. recrystd. gave 2.45 g. (88%) Et ester (XVIII), colorless needles, m. 82-3° (from aq. EtOH). XVIII (1.8 g.) heated 1 hr. on the steam bath with 2.5 ml. N<sub>2</sub>H<sub>4</sub>.H<sub>2</sub>O, the mixt. dild. with H<sub>2</sub>O, filtered, and recrystd. gave 1.45 g. IV, m. 209° (from H<sub>2</sub>C). 8-Hydroxy-7-quinolincarboxylic acid (XIX) (40.0 g.) in 800 ml. EtOH treated dropwise with 80 ml. concd. H<sub>2</sub>SO<sub>4</sub>, refluxed 18 hrs. on the water bath, the dark yellow soln. poured into 1 l. H<sub>2</sub>O, the mixt. adjusted to pH 7-8, exhaustively extd. with CHCl<sub>3</sub>, the ext. washed with aq. Na<sub>2</sub>CO<sub>3</sub>, concd. *in vacuo*, and the residue distd. gave 15.5 g. XIX Et ester (XX),

and recrystd. from 100 ml. EtOH gave 10 g.  $\rho\text{-Pb(CH}_2\text{CH}_2\text{OC}_6\text{H}_4\text{CHO)}$  (XI), m. 90-1°. XI (5 g.) in 60 ml. EtOAc hydrogenated over Pd-C at atm. pressure at room temp., and the product dild. gave a quant. yield of  $\rho\text{-Pb(CH}_2\text{CH}_2\text{OC}_6\text{H}_4\text{CHO)}$ , m. 100-6°. A soln. of 4.6 g. KOH, 10 g. IX, and 18 g. 2-cyclohexen-1-yl chloride (RCI) (R = 2-cyclohexen-1-yl) in 50 ml. EtOH let stand overnight, dild. with H<sub>2</sub>O, extd. with C<sub>6</sub>H<sub>6</sub>, and the ext. distd. yielded 8 g.  $\rho\text{-RC}_6\text{H}_4\text{CHO}$ , m. 155-6°. RCH<sub>2</sub>COEt (XII) (67 g.), 200 ml. abs. EtOH, and 5 ml. concd. H<sub>2</sub>SO<sub>4</sub>, boiled 3 hrs., concd. m. 57-9°, the vol. *in vacuo*, dild. with 200 ml. H<sub>2</sub>O, the oil extd. with C<sub>6</sub>H<sub>6</sub>, and the ext. distd. yielded 63 g. XII Et ester (XIII). XIII (63 g.) in 400 ml. abs. EtOH warmed to 50°, the source of heat removed, the soln. treated over 10 min. with 30.75 g. Na, the latter consumed after stirring 1 hr., the warm soln. poured into 1 l. H<sub>2</sub>O, extd. with five 300-ml. portions of Et<sub>2</sub>O, the exts. washed with H<sub>2</sub>O, dried, the Et<sub>2</sub>O evapd., and the residue distd. gave 24 g.  $\rho\text{CH}_2\text{CH}_2\text{OH}$

(XIV), b<sub>1</sub> 85-7.5°. Similarly prep'd., 50%  $\text{CH}_2\text{CH}_2\text{CH}_2\text{CH}_2\text{CH}_2\text{OH}$  (XV), b<sub>1</sub> 80-6°. XIV (22 g.) in 50 ml. abs. Et<sub>2</sub>O treated dropwise with 15.7 g. PBr<sub>3</sub> in 20 cc. abs. Et<sub>2</sub>O over 15 min. (ice-cooling), the soln. let stand 1 hr. in ice-water, then washed with 3 × 50 ml. H<sub>2</sub>O and 2% NaHCO<sub>3</sub>, dried, evapd., and distd. gave the corresponding Br compd. (XVI), b<sub>1</sub> 85-90°; the Br compd. from XV similarly, b<sub>1</sub> 85-70°. Both bromides were unstable and were treated immediately after prepa. KOH (3.66 g.), 7.68 g. IX, and 12 g. XVI in 50 ml. EtOH boiled 8 hrs., the mixt. dild. with H<sub>2</sub>O, the oil extd. with C<sub>6</sub>H<sub>6</sub>, the ext. washed with NaOH and H<sub>2</sub>O, dried, evapd. and distd. gave 8.2 g.  $\rho\text{-RCH}_2\text{CH}_2\text{OC}_6\text{H}_4\text{CHO}$ , b<sub>1</sub> 160-5°. The following compds. were analogously prep'd. from IX and the appropriate bromide:  $\rho\text{-CH}_2\text{CH}(\text{CH}_2)_2\text{OC}_6\text{H}_4\text{CHO}$ , b<sub>1</sub> 187-94°;

*L. Toldy, et al.*

*b.p.* 160-3°, m. 87-8° (from  $C_6H_6$ -ligroine). XX (1 g.) in 10 ml. EtOH added dropwise to 3 ml.  $NiH_4\cdot H_2O$  in EtOH and the product recrystd. yielded II, m. 140-5° (decompn.) (from EtOH). Et 5-nitro-8-hydroxy-7-quinalinecarboxylic acid (m. 149-50°) with  $NiH_4\cdot H_2O$  gave III, m. 220-5° (decompn.) (from EtOH). Similarly were prep'd. V, colorless needles, m. above 350° (from  $H_2O$ ); VIII, m. 177-8° (from MeOH); VII, colorless needles, m. 190-7°. Et 5-nitro-2-furancarboxylate (XXI) (2.5 g.) in 200 ml. abs. EtOH treated at 0° with 680 mg.  $NiH_4\cdot H_2O$ , left 2 days at 0°, the soln. treated with C, the EtOH distd. *in vacuo*, and the residue recrystd. from EtOH gave impure VI which was purified by subliming out unchanged XXI and recrystg. the residue twice from EtOH, yielding 0.6 g. VI, m. 162-4°. II. Derivatives and analogs of *p*-aminosalicylic acid. L. Vargha, L. Toldy, S. Lendvay, I. Koczka, and C. Ivánovics. *Ibid.* 346-54.—Several derivs. and analogs of 2,4-HO( $H_3N$ ) $C_6H_4CO_2H$  (I) were prep'd. and tested for antituberculous activity. All the compds. had weaker activities than I. The following compds. were prep'd. (formula and min. effective diln. given): 2,4-HO( $H_3N$ ) $C_6H_4CH_2CH$  (II), inactive at M/10000; 2,4-HO(Cl) $C_6H_4CO_2H$  (III), inactive at M/10000; 2,4-HO[2,4-HO( $H_3N$ ) $C_6H_4CONH]C_6H_4CO_2H$  (IV), M/10000; 2,4-HO(2-HO $CC_6H_4CONH)C_6H_4CO_2Et$  (IVa), M/16000; 2,4-HO(1,2-C<sub>6</sub>H<sub>4</sub>(CO)<sub>2</sub>N) $C_6H_4CO_2Et$  (V), in-

active at M/10000; 2,4-HO( $C_6H_4N$ ) $C_6H_4CO_2H$  (VI), M/10000; 4,2,6-O<sub>3</sub>(HO) $C_6H_4CO_2H$ , inactive at M/10000; 4,2,6-H<sub>3</sub>N(HO) $C_6H_4CO_2H$ , M/20000; 4-H<sub>3</sub>N $C_6H_4CH_2CH$ :CHCO<sub>2</sub>H, inactive at M/10000; 4-H<sub>3</sub>N $C_6H_4CH_2CH$ :CHCO<sub>2</sub>Pr (VII), inactive at M/10000; I (control), M/640000; 2,4-AcO(O<sub>3</sub>N) $C_6H_4CH_2Br$  (4 g.) and 2 g. fused KOAc in 20 ml. AcOH refluxed 2.5 hrs., the mixt. dild. with  $H_2O$ , and recrystd. gave 2.5 g. 2,4-Ac(O<sub>3</sub>N) $C_6H_4CH_2Ac$  (VIII), m. 75-6° (from EtOH). Hydrolysis of 3.2 g. VII in 40 ml. 30% alc. HCl by boiling 4 hrs., the EtOH distd., the residue extd. with  $C_6H_6$ , and the  $C_6H_6$  removed left 2 g. 2,4-HO(O<sub>3</sub>N) $C_6H_4CH_2OH$  (IX), yellow oil; *p*-nitrobenzoate, m. 202-5° (from EtOH). Catalytic reduction of 1.8 g. IX in 50 ml. EtOH with Pd-C (the substance absorbed 925 ml. H in 30 min.), the mixt. filtered, the filtrate concd. *in vacuo*, and the residue recrystd. gave 1.2 g. II, unstable, m. 271-3°. LiAlH<sub>4</sub> (2.3 g.) in 200 ml. abs. Et<sub>2</sub>O gradually added with stirring to 4.41 g. IIa in 100 ml. abs. Et<sub>2</sub>C, the mixt. refluxed 30 min., unchanged LiAlH<sub>4</sub> destroyed with EtOAc, the soln. decompd. with  $H_2O$  and 10%  $H_2SO_4$ , the Et<sub>2</sub>O layer evapd., and the residue recrystd. yielded 2.8 g. III, m. 119-20° (from  $C_6H_6$ ). To 65 g. I Et ester in 800 ml. abs. CHCl<sub>3</sub> was added dropwise with stirring and cooling 72.4 g. 2,4-HO(O<sub>3</sub>N) $C_6H_4COCl$  in 400 ml. CHCl<sub>3</sub>, followed by 400 ml. pyridine, the mixt. let stand 2 days at room temp., the CHCl<sub>3</sub> distd. *in vacuo*, the residual mixt. warmed, cooled, the product filtered, washed with 20 ml.  $C_6H_4N$ , treated with 5% HCl, finally washed with  $H_2O$  and EtOH, and repeatedly recrystd. from  $C_6H_6N$  to give 64 g. 2,4-HO[2,4-HO(O<sub>3</sub>N) $C_6H_4COHN]C_6H_4CO_2Et$  (X), m. 251-2°. Hydrogenation of 5 g. X in 250 ml. EtOAc over 10% Pd-C gave the  $H_2N$  compd. (XI), colorless needles, m. 200-1° (from AcOH). Hydrolysis of XI with aq. NaOH gave

(OVL/k)

crude IV which, ptd, from  $C_6H_5N$  with abs. EtOH, colorless, decompd. 242-2<sup>o</sup>. I (3 g.) and 2.0 g. phthalic anhydride (XII) in 150 ml. EtOAc let stand 24 hrs. at room temp., the material filtered, and washed with EtOAc, afforded IVa acid, decompd. 188-90<sup>o</sup> with gas evolution, becoming solid, and then m. 216-20<sup>o</sup>. I Et ester (3.0 g.) and 3 g. XII in 50 ml. EtOAc let stand overnight, the crystallized product filtered, and washed with EtOAc gave 4.7 g. IVa, m. 179-80<sup>o</sup> (decompn.). IVa (1 g.) heated 1 hr. at 200<sup>o</sup> and recrystd. yielded V, m. 102-3<sup>o</sup> (from AcOH). Benzoylation of 15.3 g. I in an  $Na_2CO_3$  gave 20 g. VI, m. 230-1<sup>o</sup> (from EtOAc).  $\rho$ -HO,CCH:CHC<sub>6</sub>H<sub>5</sub>NH<sub>2</sub>,HCl (6 g.) and 60 ml. PrOH treated 4 hrs. with dry HCl while warming on the water bath, the soln. cooled, the cryst. material filtered, and washed with a little PrOH gave 3 g. VII, HCl, m. 210<sup>o</sup> (decompn.).

William Braker

T. C. W. H. W.

Antitubercular agents. II. p-Aminosalicylic acid and analogues. L. Varga, I. Toldy, S. Lendvay, I. Kecskes, and G. Ivánovics (Acta chim. Hung., 1954, 4, 345-354).—Deriv. and analogues of p-aminosalicylic acid show weaker activities than p-aminosalicylic acid. The following compounds are prepared (the smallest active mol. concn. are recorded): 4-nitro-2-acetoxysalicyl acetate,  $C_{11}H_{10}O_4N$ , m.p. 75-76°, 4-nitro, an oil (p-nitrobenzaldehyde,  $C_6H_5O_2N$ , m.p. 202-205°), 4-amino- $C_6H_5O_2N$ , m.p. 271-273°, and 4-Mero-2-hydroxybenzyl alcohol,  $C_6H_5O_2Cl$ , m.p. 110-120°. Et p-N-p'-nitrosalicyloylamido-,  $C_{11}H_{10}O_4N_2$ , m.p. 251-252°, Et p-N-p'-aminosalicyloylamido-salicylate,  $C_{11}H_{10}O_4N_3$ , m.p. 200-201° [acid,  $C_{11}H_{10}O_4N_2$ , decomp. 242-243°]. N-o-carboxybenzoyl-p-aminosalicylic acid,  $C_{11}H_{10}O_4N$ , m.p. 188-190° (decomp.) and 215-220° after resolidification [Et ester,  $C_{11}H_{10}O_4N$ , m.p. 179-180° (decomp.) (inactive at  $\mu/10000$ )]. Et p-phthalimidosalicylate,  $C_{11}H_{10}O_4N_2$  (inactive at  $\mu/10000$ ), p-benzamidosalicylic acid,  $C_{11}H_{10}O_4N$ , m.p. 230-231° (decomp.), p-benzamidosalicylic acid,  $C_{11}H_{10}O_4N$ , m.p. 192-193°, propyl p-aminocinnamate (hydrochloride,  $C_{11}H_{10}O_4NCl$ , m.p. 210° (decomp.)). H. Wauz.

**Substances with tuberculostatic effects.** I. Orlók Czinder, Lajos Tóth, and Imre Falvicus (Chem. Factory G. Richter, Budapest), *Magyar Kém. Lapja* 4, 505-602 (1949).—Drugs used in tuberculosis therapy belong to 3 groups: chemotherapeutic preps., antibiotics, and sero-therapeutic preps. Substances belonging to the 1st group were prep., and the tuberculostatic effects of some aromatic primary amines and the influence of substituents in the para position to the NH<sub>2</sub> group were investigated. The experience gained was utilized in the actual production of some derivs. of 4-(2-NH<sub>2</sub>NHOOCCH<sub>2</sub>CO<sub>2</sub>H and of 2,4-CI-(H<sub>2</sub>NCH<sub>2</sub>CO<sub>2</sub>H)-4-Nitro-2-amino-benzoic acid (I), m. 201° (from EtOH), was obtained in 95% yield by boiling 30 g. 4,2-O(NAcNH<sub>2</sub>)C<sub>6</sub>H<sub>4</sub>CO<sub>2</sub>H in 75 ml. EtOH with 300 ml. 21% H<sub>2</sub>SO<sub>4</sub>. 1 (10-2 g.) was also prep. by stirring 400 g. (w.v. 300 ml. 25% NaOH) powder, chlorinated lime contg. 24 g. active Cl, and 50 g. powd. 4-nitrophthalimide, stirred 2-3 hrs. at 30-40°, then heating to 80°, and adding HCl. 4-Nitrosalicylic acid (II) (70-80%), m. 224°, was prep. by treating 60 g. I with 42 g. anhyd. Na<sub>2</sub>CO<sub>3</sub> in 300 ml. water, dilg. with water to 1500 ml., adding 1 kg. ice and a freshly-prepd. satd. aq. soln. contg. 23.2 g. NaNO<sub>2</sub>, then adding cautiously a cooled soln. of 78 ml. concd. H<sub>2</sub>SO<sub>4</sub> in 300 ml. water, next adding 0.5 kg. ice, stirring 1 hr., adding cautiously 100 g. cryst. CuSO<sub>4</sub> in 500 ml. hot water over a period of 90 min. at 90-100°, boiling 30 min., and crystg. from 50% EtOH. 4-Nitrosalicyloyl chloride (III) (100%), m. 61-2° (from petr. ether), was obtained by heating 91.5 g. II, 270 ml. SOCl<sub>2</sub>, and 0.2 g. anhyd. AlCl<sub>3</sub> on a water bath 60-90 min. Pr 4-nitrosalicylate (IV), m. 39-2° (from EtOH), was obtained in almost 100% yield by treating III with excess PrOH 1 hr. on water bath, dissolving the oily product in C<sub>6</sub>H<sub>6</sub> and distg. at 140-5° and 3 mm. Pr 4-aminosalicylate (V), m. 104-5° (from EtOH), was obtained in 13% yield by hydrogenating 20 g. IV in 100 ml. EtOAc with Raney Ni, filtering, and distg. in vacuo below 50°. V was also prep. by boiling 42 g. Fe filings, 130 ml. 70% EtOH, and 2.6 ml.

concd. HCl several min., slowly adding 40 g. IV, neutralizing with alkali carbonate, and filtering. V.HCl, m. 173-4°, Pr 4-acetamido-salicylate, m. 130-41° (from EtOH), was obtained from V with Ac<sub>2</sub>O in C<sub>6</sub>H<sub>6</sub>. Pr 4-propionylamino-salicylate, m. 181°, was obtained from V in C<sub>6</sub>H<sub>6</sub> with Et<sub>2</sub>CO. Pr 4-benzimidomethylate, m. 103-8° (from EtOH), was obtained by benzoylating V in C<sub>6</sub>H<sub>6</sub> in the presence of C<sub>6</sub>H<sub>5</sub>N. Pr 4-phthaloylamino-salicylate, m. 144-5° (from oxalic ester), was obtained by heating V 1 hr. with an equiv. amt. of o-C<sub>6</sub>H<sub>4</sub>(CO)<sub>2</sub>O and some C<sub>6</sub>H<sub>5</sub>N in C<sub>6</sub>H<sub>6</sub>. Bu 4-nitrosalicylate, (VI), m. 140-6°, was obtained in 90% yield by boiling 200 g. II, 500 ml. BuOH, 400 ml. C<sub>6</sub>H<sub>6</sub>, and 20 ml. concd. H<sub>2</sub>SO<sub>4</sub> in a special distn. app. 0 hrs. Bu 4-aminosalicylate (VII), m. 95° (from EtOH), was obtained by treating VI as described for V. Bu 4-aminosalicylate-HCl, m. 181-8°, was obtained by treating VII with dry HCl. Bu 4-acetamido-salicylate, m. 118-20° (from EtOH), was obtained from VII in C<sub>6</sub>H<sub>6</sub> with Ac<sub>2</sub>O. Bu 4-propionylamino-salicylate, m. 120-2° (from EtOH), was obtained from VII in C<sub>6</sub>H<sub>6</sub> with Et<sub>2</sub>CO. Iso-Bu 4-nitrosalicylate (VIII), m. 48-52°, was obtained similarly. Iso-Bu 4-aminosalicylate, m. 85° (from EtOH), was obtained from VIII as described for V. Pr 4-nitrosalicylate (IX), m. 148-50° (from glacial AcOH or oxalic ester), was obtained by adding 20.1 g. III in 15 ml. dry CHCl<sub>3</sub> to 9.4 g. PhOH in 15 ml. dry CHCl<sub>3</sub> and 9 ml. abs. C<sub>6</sub>H<sub>5</sub>N, heating on a water bath 2 hrs., cooling, and filtering. Pr 4-aminosalicylate, m. 148° (from dil. EtOH), was obtained by hydrogenating 5 g. IX in 40 ml. dioxane at 60° with Raney Ni, filtering, treating with dry HCl, again filtering, heating the ppt. with 30 ml.

"APPROVED FOR RELEASE: 07/16/2001

CIA-RDP86-00513R001756030003-6

12.5% of the total weight of the sample was found to be Tuber  
ketoxanthide. Data taken at 10% Urethane and dimethylbenzoate  
had these values:

Experimental Synthesis and properties

APPROVED FOR RELEASE: 07/16/2001

CIA-RDP86-00513R001756030003-6"

2571

was to be 0.9 µg./kg. Adrenaline (40 µg./kg.) administered 3-8 min. before apomorphine injection raised the ED<sub>50</sub> to 13 µg./kg., indicating a delayed inhibitory effect on the response of the vomiting centre to apomorphine. When adrenaline was administered during the latent period of emetic action following apomorphine injection, the frequency of vomiting rose to 2.75 as compared with a control value of 1.25, this representing an immediate effect of adrenaline.

847. THE THERAPEUTIC EFFECT OF SCHIZANDRA CHINENSIS IN THE  
TREATMENT OF SOME DERMATOSES THROUGH PREPARATIONS FOR  
EXTERNAL USE (Bulgarian text) - Tolev I., Toleva P. and Boyad-  
jieva A. - SAVR. MED. 1957, 3 (31-37) Tables 4

Several dermatoses were treated with ointments containing 2.5-20% of an aqueous  
or alcoholic extract of Schizandra chinensis (Chinese lemon). These substances not  
only combated itching and inflammation, but they also proved to have a pronounced  
antibiotic effect against M. pyogenes aureus, B. pyocyaneus and Str. haemolyticus.
